

SQUASH COURT QUALITY PLAN

Quality Plan Aims

To ensure that all squash courts fitted out with by Courtcraft comply with the accepted performance criteria published by the governing bodies of Squash Rackets:

The World Squash Federation (WSF)

England Squash & Racquetball (ESR) formerly The Squash Rackets Association

The Quality Plan identifies five key areas:

- Design
- Planning
- Construction
- Preparatory Work
- Installation and Quality Checks

Courcraft will liaise with the Main or Management Contractor at all five stages of the project, drawing attention to any discrepancies in design, planning, construction and product installation which may affect compliance with WSF/ESR specifications and industry standards for the correct installation of squash court finishes. Documents that should be referred to in conjunction with this Quality Plan and which form an integral part of it are:

For design & construction:

- *Courcraft Squash Court Specification*

For preparatory work & installation

- *Courcraft Squash Court Method Statement*

The Specification includes information on design criteria, construction and product information, the Method Statement information on programming, preparatory work and Courtcraft site quality checks.

Design

Courcraft will check and evaluate all relevant contract drawings and specifications at an early stage to identify any design or dimensional discrepancies, which might, if left unchanged, prevent compliance with correct standards. In particular:

Design principles

To maximize the life expectancy of the squash court finishes & ensure the use of substrates and structures which are appropriate for the products, to avoid premature breakdown and avoid the use of unnecessary or special treatments involving extra cost and conferring no performance benefit

Specifications

will be checked to ensure that only WSF/ESR approved products are specified.

Critical Dimensions

will be checked in accordance with details given in Courtcraft standard drawings
