

 **innov8**
WALL PANEL SYSTEM

Innov8 Squash Wall Panel System
Designed, manufactured and built entirely
within the UK by Courtcraft.

Innov8 is a double-skin, self-supporting system and is appropriate for new build courts. In multiple court configurations, a dividing Innov8 wall can be installed as a moveable wall. Thus courts that are side-by-side can be easily expanded for other activities. This also allows our squash courts to convert to a doubles squash court very easily.

Innov8 is the first and only British product to achieve accreditation from the World Squash Federation.

The Innov8 system is designed
with total flexibility in mind.

WORLD SQUASH ACCREDITED PRODUCT

All Innov8 squash court panels & associated products have full World Squash Federation & England Squash accreditation.

After undergoing a rigorous research, development & testing process, you can rest assured that the products supplied by us are fit for purpose and come with a UK manufacturer's full **10 year warranty**. We are the only company in the UK that manufactures & installs panel court systems. By utilising new modern manufacturing techniques, the Innov8 squash court panel system does away with outdated construction methods.

Choosing the installation of the Innov8 panel court system allows you to eliminate any wet trades & costly block-work wall construction, thus improving on the overall construction build programme. **The courts are remarkably easy to maintain** and as such reduce down time when it comes to maintenance, compared to traditional courts.

OUR RESULTS ARE THE BEST ON THE MARKET

The overall construction thickness of the panel system walls are 96mm, comprising of 2 layers of specialist high density board. These are painted with a specialist wall coating, suited to the wear & tear of squash court play. The panels are fixed to main frame aluminium sections, creating a 'sandwich' effect.

The cavity between the two boards is finally filled with fire dried sand. This gives a true ball response, specifically designed to give the courts a traditional playing surface feel that until now was only associated with traditional plastered courts.

The results that Courtcraft have achieved are the best on the market.

RIGOROUSLY TESTED TO ENSURE QUALITY

As time goes on, situations change. This is why Innov8 has been specially designed with flexibility & the end user in mind.

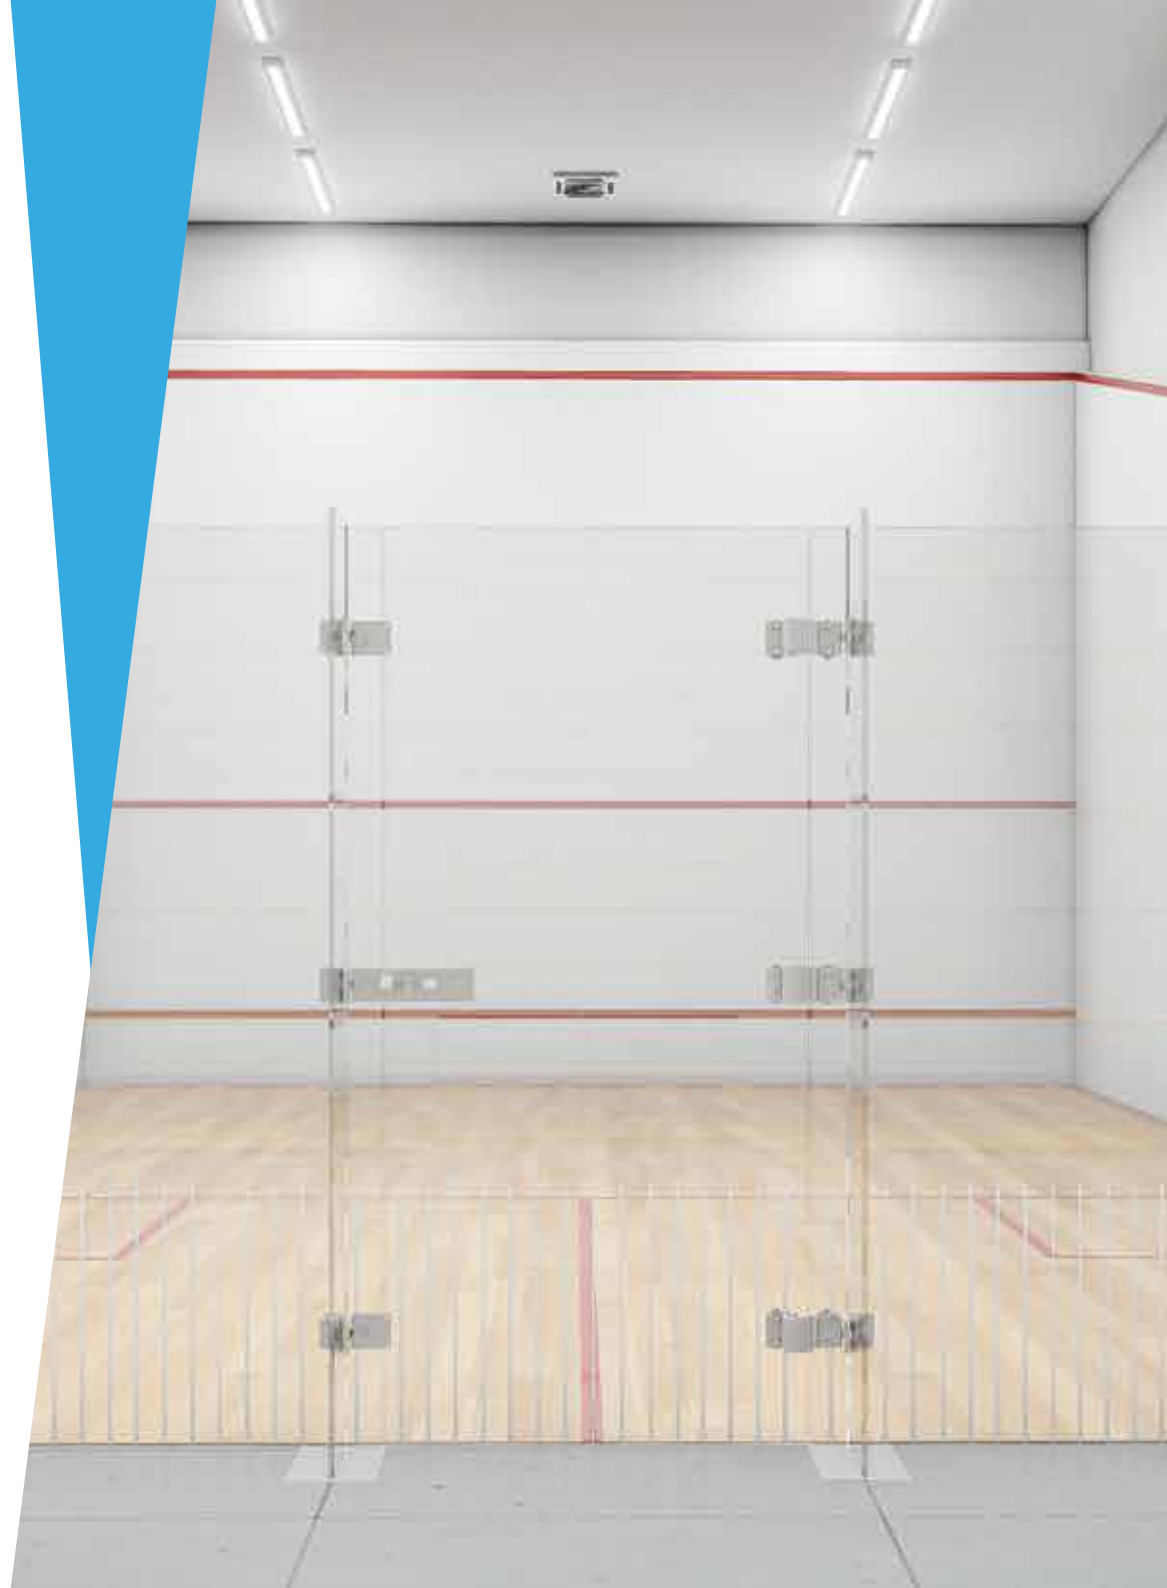

Innov8's free standing panel walls are constructed in such a way that they are entirely self-supported & independent from the main fabric of the building. This means that the courts could be disassembled and be moved to other areas, if required at a later date.

The walls are pre constructed in the factory, ensuring that the minimum number of panel sections are used. They undergo a rigorous quality inspection testing process prior to leaving the factory, making sure that the dimensions and quality of the product are exact. Once delivered to site, the panels are assembled, ensuring all of the surface joints are fully prepared & filled. This ensures that the panel surfaces are free of visible joints & gap lines, before applying the specialist 'hardwall' coating.

TAKE ADVANTAGE OF INNOV8 WALL PANELS

Discover all of the benefits of taking advantage of our Innov8 Squash Court Wall Panel System in your squash courts today

- Full World Squash Federation & England Squash approval.
- 10 Year Manufacturer's warranty. *Subject to T's & C's
- Manufactured within the UK & installed directly by our long serving employees.
- Replacement parts in stock, within the UK.
- Fixed or movable court wall options available.
- Various options to make the best use of the space you have available.
- Overall wall thickness is just 96mm.
- All walls are made from high-density, moisture resistant materials.

TAKE ADVANTAGE OF INNOV8 WALL PANELS

- Twin panel construction, comprising of two number high density & moisture resistant panels, encapsulating the specialist aluminium profile support bars & back-filled with fire dried sand.
- Standalone, self-support construction cuts down on construction times and eliminates costly blockwork construction.
- Lower maintenance levels, due to the durable specialist wall coating application.
- Panel surfaces are free of visible joints lines.
- Walls don't breakdown in the same way as traditional plaster, meaning less expensive repairs.
- A wide number of court combinations are achievable.
